PREFACE

This report is the seventh revision of the original one entitled Mississippi Employment: 1967-1971. The original was prepared by Leo R. Cheatham in August, 1974. The first, second, third, fourth, fifth and sixth revisions were prepared by Robert L. Frnka in September, 1976, December, 1977 and 1978 and July 1979, 1980 and 1981.

Statistics utilized in the present revision, like those in the earlier edition were taken from computer listings of the Bureau of Economic Analysis of the United States Department of Commerce and supplied to the Division of Business Research, Mississippi State University. The computer listings show the distribution of employment for counties of Mississippi. This report is a companion to Mississippi Personal Income: Selected Years 1975-1980, also published by the Division of Business Research in September, 1982.

Comments and suggestions for improvement of its contents and the manner in which they are presented are earnestly solicited. Address your response to the Editor, Mississippi Employment: 1975-1980, Post Office Box 5288, Mississippi State, Mississippi 39762.

Guy T. Peden, Jr.
Director

CHAPTER I

DEFINITIONS AND CONCEPTS

The bulk of the employment estimates (approximately 75 percent) were prepared from ES-202 reports of State Unemployment Insurance Programs. Data sources for noncovered estimates include Bureau of Labor Statistics, Old Age and Survivor's Insurance Administration, Bureau of the Census and Selected Professional Associations. Those industries considered as noncovered include forestry, railroad transportation, hospitals, private educational services, museums, art galleries, nonprofit membership organizations, private households, etc.

Because the BEA's employment series is estimated from administrative records of employers, persons holding more than one job are counted more than once. In addition part-time workers are also included. Since persons are counted at the place of employment, the estimates presented in this report reflect the location of employment and not the location of the residence of the employed persons. This corresponds more appropriately to "Total Labor and Proprietors Income by Place of Work" as shown in the tables of Mississippi Personal Income: Selected Years 1975-1980.

In the earlier tables of this report which follow, the format for employment categories has been modified somewhat from those tables taken directly from the BEA's estimates. The total of all employment categories will still be 100 percent but farm proprietors will be grouped with farm wage and salary employment thereby combining all employment in farming as one category. Of course non-farm wage and salary employment will now exclude farm wage earners while proprietors will be non-farm proprietors only.

CHAPTER II

TRENDS IN EMPLOYMENT IN MISSISSIPPI

Employment trends in Mississippi over the past six years are similar in many respects to overall trends in the nation except the trends are much more pronounced for the state. As shown in Tables I and II, employment in the agricultural sector continues to become a declining portion of total employment for the state as well as the nation. While the Mississippi share of agricultural employment is about two and one-half times that of the United States, the rate of decline for Mississippi is about the same as the national rate. This reduction in the agricultural portion of employment for Mississippi is more than offset by corresponding gains in the portions of private non-farm wage and salary employment and non-farm proprietors. Government employment has remained almost a constant portion over this period. For the United States, the government sector has become a declining portion of total employment.

Table III gives a further breakdown for similar employment categories on all counties in Mississippi. The percentage increase in total employment over the 1975-1980 period has been more rapid for the nation than for Mississippi (fifteen percent vs. twelve percent). While the average increase in total employment for all of Mississippi was twelve percent, there were 28 counties, as illustrated in Figure I, that increased equal to or above that rate with the most rapid advances occurring in Tishomingo, Claiborne, Hancock and Rankin Counties (85 percent, 67 percent, 62 percent, and 37 percent respectively). There were 12 counties that showed actual declines over this period with the largest occurring in Jefferson County (nine percent decline). For
